

"PGI's DatatraX® software is set to be the uncontested leader in real-time statistical analysis of football matches throughout the world. Thanks to Quintic's expertise, the DatatraX Information Application (DIA) offers impressive visual match analysis tools, including real-time interactive animated views of a game. As a key product component, it is also a big enabler for marketing activities. We truly appreciate Quintic's proactive approach, flexibility and problem-solving abilities - Quintic's developers often suggest solutions to challenges we face in other project areas, which aren't even their responsibility."

George Canterbury, Technical Director, Performance Group International

"Lloyd's Register supplies calculation software to support its Marine Classification activities. These products are being continually improved, and to this end we call on expert development teams to ensure timely project delivery to high quality standards. We particularly chose Quintic in this case for their well proven abilities and knowledge of CAD interfaces. But this is only one of the strengths that make Quintic an ideal development partner. We gain a lot from the depth of expertise of Quintic's developers. Of note is the clear dedication to customer service and to meeting timescales. Quintic's attitude is flexible and approachable; the team is always prepared for meetings and reviews at short notice, and places high value on openness and clear communication."

Martin Pittilo, Manager of Ship Design Systems, Lloyd's Register London

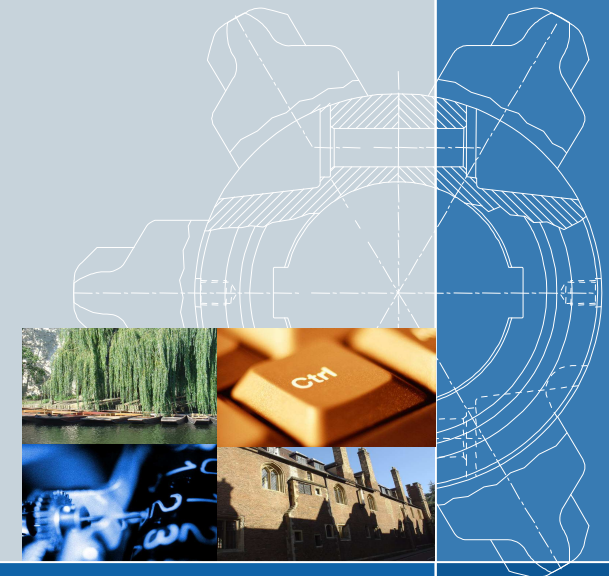

"We initially approached Quintic because we needed a neutral third party with expertise in both engineering software and GUI design. We were looking for an unbiased view of the UI style and user model appropriate for the next release of our Flowmaster software. Outsourcing this type of work to a new provider can be quite daunting, even when you know that an outside view is essential. Our experience with Quintic has been extremely positive. As a matter of fact, our Project Manager's initial reaction after receiving the first deliverables from Quintic was: 'Why didn't we do this sooner?' The email one of my colleagues sent to the Quintic and Flowmaster teams involved said it all: 'I'm just looking at the new icons in the latest beta - apart from looking fantastic they make sense of the whole cataloguing system. Amazing, it really is a UI transformation!'"

Leigh Gillard, Flowmaster Ltd, UK

CAD Schroer

Your Software Development and Consultancy Partner

Software Development in Partnership

Do you regularly work with third parties to flexibly meet your technical needs, or are you just starting to think about outsourcing? In either case, Quintic's technical computing experts are here to help.

- We offer a full product lifecycle service, underpinned by a solid business relationship, designed to give our customers the competitive edge.
- Our business relationships are built on long-term commitment, trust, and years of expertise.
- We listen carefully to your requirements and expectations, then work to support your business objectives.

Unlike individual contractors, we'll still be available after the completion of a contract. The knowledge and skills gained while working on your projects remain accessible, ready for you to deploy again when required. By outsourcing with Quintic, you benefit from high quality solutions at a competitive price, project delivery to your timescales, and the ability to fully focus on your strategic goals – now that's value for money!

Why Outsource?

- Acquire specialist development expertise when you need it
- Focus on your strategic goals
- Improve your flexibility & responsiveness
- Increase product quality
- Reduce time to market
- Offer a broader range of products & services

Why Quintic?

- Proven expertise
- Knowledge retention
- Management know-how
- A reputation for service excellence
- Value for money

About Quintic

Established in 1995, Quintic is a UK software development and consultancy organisation with a strong graphical background. Our high calibre staff reflects Cambridge's "silicon fen" culture of research and development excellence, with over 300 combined years of development experience. We have a long track record of developing complex engineering systems and technical applications, including some of the world's largest computer aided design systems. Quintic was acquired by CAD Schroer Germany in 2005. As a division of CAD Schroer UK Ltd, it continues to specialise in outsourced development and consultancy projects - now with the ability to draw on an even larger pool of experts, across Europe.

Our Services

New Systems Development (full product lifecycle support)

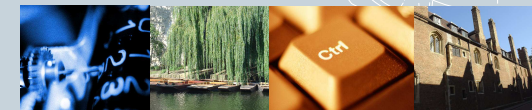

- Project Management
- Requirements Research and Analysis
- Product Architecture
- Rapid Prototyping
- Software and GUI Design and Development
- Testing
- Documentation
- Support & Maintenance
- Training

Systems Implementation

- Systems Integration
- Systems Customisation

Our Expertise

- 2D CAD
- 3D CAD
- Schematic Systems
- Graphics Systems
- Internet Technologies
- User Interfaces
- Databases
- Product Interfaces
- Data Visualisation
- Client/Server
- Multi Platform Development
- Document Management
